WORK EXPERIENCE

Angle Systems LLC.

San Jose, CA

Data Engineer

January 2024 – Present

- Developing new product lines with software integration of cameras, laser scanners, and other external hardware.
- Leading cloud storage shift of software-obtained data through SQL database design and administration.
- Conducting R&D on best practices for data processing and management with AWS RDS, S3, and Lambda.

California Polytechnic State University, San Luis Obispo

San Luis Obispo, CA

Full Stack Developer / Student Researcher

June 2022 – September 2023

- Created SQL database architecture to store account data, survey templates, and survey responses for application.
- Developed data pipelines to move 100-question survey responses from Qualtrics API to internal database.
- Formulated algorithms to analyze work metrics for 1000s of survey responses to determine career matches.

VOLUNTEER EXPERIENCE

Art Sphere Inc.

Remote

Digital Data Analyst

December 2023 – June 2025

- Leading BigQuery implementation for long-term retention of data from 15,000 monthly website visitors.
- Advising on reorganization decisions for 1000s of blog pages using insights from Google Analytics data.
- Delivering weekly reports on visitor interaction metrics throughout the organization's social media platforms.

EDUCATION & CERTIFICATIONS

California Polytechnic State University, San Luis Obispo

September 2019 - June 2023

Bachelor of Science in Computer Science

Georgia Institute of Technology

(expected) August 2027

Master of Science in Computer Science; Specialization: Machine Learning

SKILLS

- Languages: Python (Flask, Pandas, PySpark, Pytorch), JavaScript, SQL, NoSQL (MongoDB)
- Tech Stack: Tableau, Looker, Google Analytics, Databricks, Docker, Orchestration (Airflow, Python Prefect)
AWS (Athena, S3, EC2, Lambda, Glue, RDS), Azure, GCP (BigQuery)

PROJECTS

- **Colorization Project** (Python[Pytorch, boto3], AWS [S3], Google Colab)
 - Trained U-Net models to colorize black-and-white images, using 1.4+ TB of data (14M+ photos).
 - Deployed a web application for colorizing images under various selectable model weights.
- **Stock Market Composition Analysis** (Python[PySpark], AWS [Athena, Glue], SQL, Tableau)
 - Analyzed S&P 500 stock composition by market cap and sectors over 28 years of daily market data.
 - Developed backend processes to retrieve stock data from 5+ separate financial APIs.
- **Market Return Calculator Interface** (Python, Orchestration[Airflow, Prefect], AWS EC2)
 - Developed interface to calculate S&P 500 investment returns for chosen intervals between last 50 years.
 - Created process to generate daily tree map charts conveying the changing S&P 500 composition.
- **Personal Search Engine/Chatbot** (Python, MongoDB, Azure[Entra ID], APIs)
 - Created a search engine for personal notes stored on the cloud using Microsoft Graph API.
 - Developed an AI chatbot interface and AI summarization for documents using Perplexity API.
